

We did our part, now it's up to you!

Learn to operate the **green** features of the new sustainable Greenbaum House!

Help **CONSERVE WATER** by using the left button for a small flush (0.8 gallons) and the right button for a large flush (1.6 gallons).

The Building Energy Kiosk on the first floor shows the building's energy and water use in real time. You can access it online at: <http://www.bedashboard.com/kiosk/home/campus/47>

The **OCCUPANCY SENSOR** will turn lights off when it does not sense any movement, but it is still best to turn lights off manually when you do not need them on.

THERMOSTATS can be adjusted within a set range.

Some **WINDOWS** open and close manually for comfort.

Feel free to let in fresh air but make sure to close them when you leave the room!

Please bring your plastic bottles, aluminum cans, cardboard and paper to the **RECYCLING ROOMS** on each floor.

For routine maintenance contact Service Wave <http://servicewave.tulane.edu>

Please visit green.tulane.edu to learn more about green building and sustainability at Tulane!

For emergency maintenance call **504.865.5445**, Option 1 Uptown Campus
